

Part Number: NLTT-20

Quantity: 20 PCS

PREMIUM QUALITY

The professional way to attach landscape lighting cable to trees.

INSTALLATION INSTRUCTIONS

- 1 Position and Wrap:** Wrap the TreeTite fastener around the landscape lighting wire until the rounded ends meet and the male prong securely inserts into the corresponding female receiving end.

- 2 Mount and Secure:** Guide the supplied stainless steel wood screw through the aligned mounting holes. Use a cordless drill or screwdriver to secure the TreeTite assembly firmly to the tree trunk or target wooden surface.

- 3 Small Gauge Adjustment:** For smaller gauge wires, overlap or wrap the TreeTite so that both flat circular faces press flush against one another. This allows the male terminal to push directly against the mounting surface, ensuring a snug and stable fit.

Professional Installation Tip

Always ensure the lighting cable retains a slight amount of slack or play within the secured TreeTite loop. Do not over-tighten against the wire; this intentional tolerance allows the cable to shift harmlessly as the tree grows over time, preventing tension or damage to your electrical system.
